

DORNIER COMPACT SIGMA[®] MODULAR LITHOTRIPTER

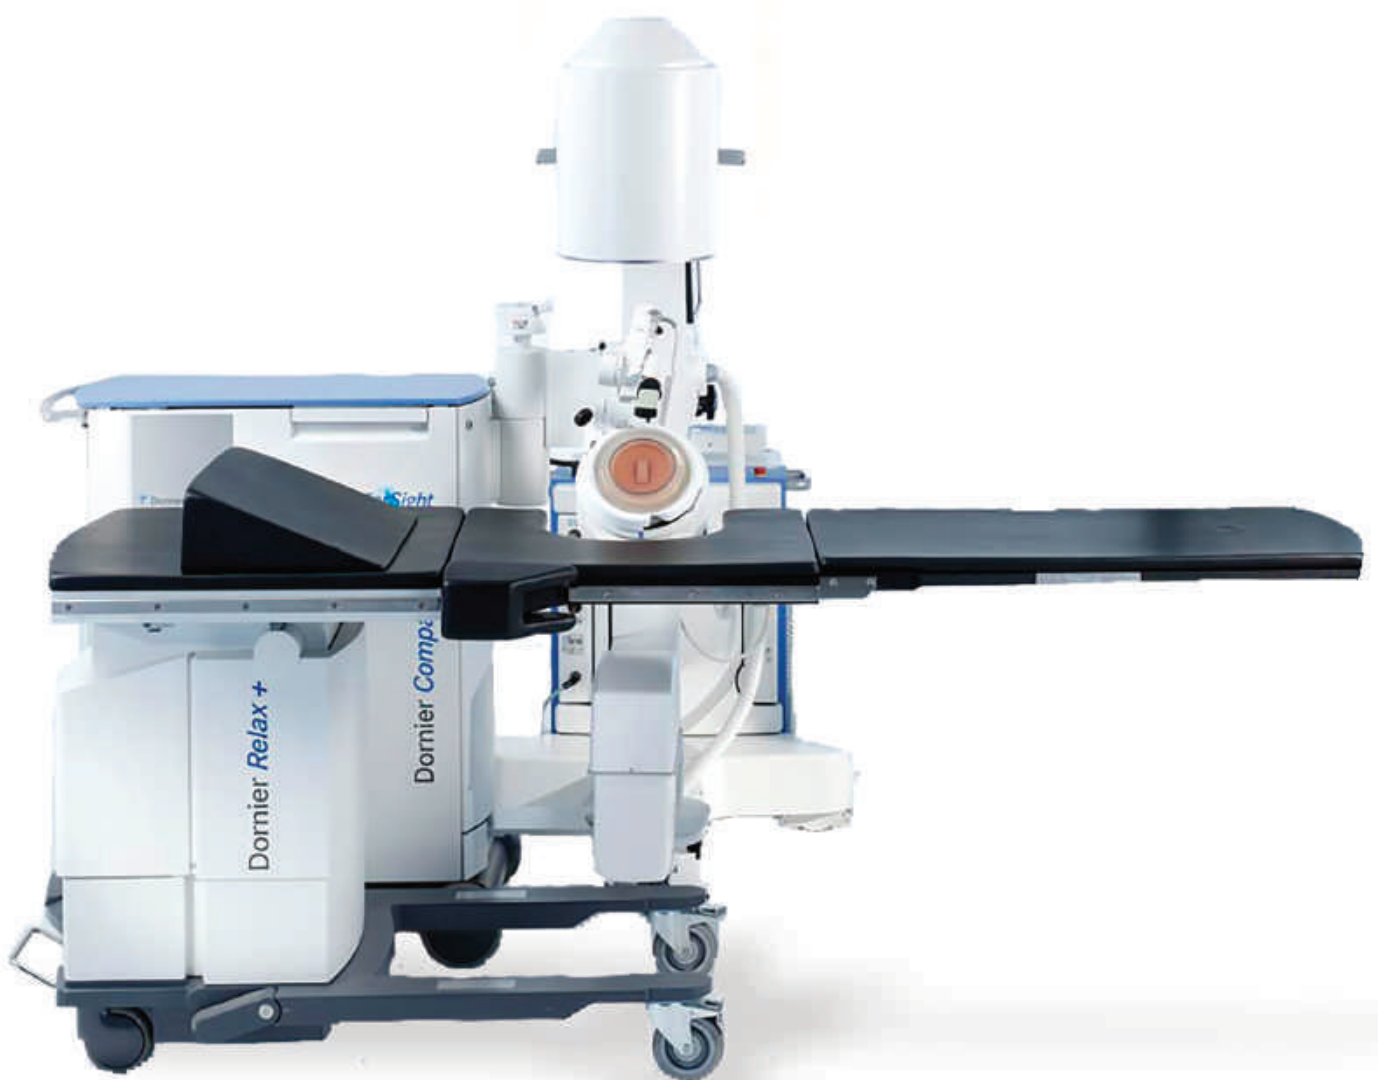

DORNIER COMPACT SIGMA

At Dornier MedTech, we strive to deliver superior, scientifically-backed products that can be trusted to deliver optimal outcomes for both patients and physicians. Experience Dornier's new energy and join the wave of physicians around the world that are focused on Leading Technology and Improving Life.

The Compact Sigma is a truly versatile modular lithotripter. Its electromagnetic shock wave source (EMSE) is the result of vast experience and expertise. When combined with available options such as C-arms, ultrasound scanners, and a fully motorized patient table, this device easily becomes a multi-functional workstation.

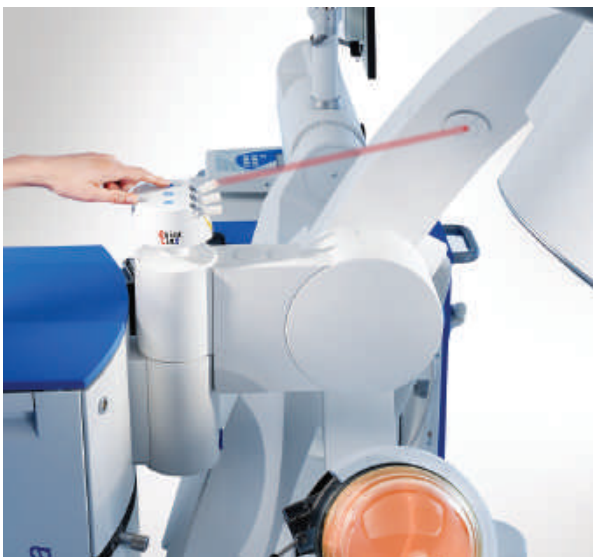

Easy Positioning of Therapy Head and Compatibility for Treatment: Engineered to offer patient comfort while allowing the physician to manipulate and combine various devices for maximum results.

- Thanks to the flexible overtable and undertable positioning of the therapy head, the patients can always remain comfortably on their backs.
- With the patient table Dornier Relax+, leverage full range of capabilities that enable a variety of procedures to be performed eliminating any need to move the patient to another room or table.
- Maximize full scale lithotripsy performance with multiple compatible X-ray C-arms and a choice of ultrasound diagnostics with the possibility of outline and FarSight localization.

PRECISION

Easy and Proper Alignment Between C-arm and Dornier Compact Sigma.

- QuickLinx, Dornier's integrated optical position control, allows to combine a variety of C-arms of well-known manufacturers without mechanical coupling.
- Ease of alignment results in faster procedure preparation.
- Three laser pointers monitor the relative position of the C-arm to Dornier Compact Sigma. Accidental misalignment or manipulation of the C-arm are quickly detected.

Compact Mobility Creates Versatility: Developed with space-saving design to ensure the system accommodates various procedure room sizes, a variety of specialties, and overall maximum usage of your medical facility.

- Eliminate scheduling conflicts and the need for a dedicated room to help increase your facility's ability to treat more patients year-round.
- Leverage the swivel movement of the therapy head and small footprint lithotripter for storage and transport from room to room or location to location.
- Protect your investment from wear and tear during transit with the heavy-duty floor plates and pads of the Dornier Transport Kit.

Dornier MedTech develops innovative and purposeful products designed to serve the needs of global hospitals, surgical centers, teaching universities, private and public urology practices, and mobile providers all across the globe.

DORNIER COMPACT SIGMA WAS DEVELOPED BY DORNIER MEDTECH -

KNOWN FOR ITS PIONEERING TECHNOLOGIES AND
REVOLUTIONARY THERAPIES IN UROLOGY, DORNIER
IS LEADING TECHNOLOGY AND IMPROVING LIFE ALL
ACROSS THE GLOBE.
